

T6360C

Mechanical room thermostat

Wunda surface mounted mechanical room thermostat is widely used in residential homes.

It is suitable for room temperature control and is easy to install, with high sensitivity and reliability. This thermostat must be located where it would not be subjected to heat gain/loss (such as above radiators, direct sunlight or in draughts).

To be used in conjunction with Wunda programmable time clock.

RTC84.13

Electronic room thermostat

Wunda electronic room thermostat is a mains voltage electronic thermostat that provides automatic temperature control for heating applications.

The accuracy of the electronic thermostat will improve system efficiency and reduce running costs. With an easy to use dial and simple operation for the user.

Wunda electronic thermostat can be either surface mounted or recessed, using a suitable surface or patress box. This thermostat must be located where it would not be subjected to heat gain/loss (such as above radiators, direct sunlight or in draughts).

RTC86.13

Electronic wet room thermostat

Wunda electronic wet room thermostat is a mains voltage electronic thermostat complete with a 3 metre probe that provides automatic temperature control for heating applications in a wet room environment.

The accuracy of the electronic thermostat and probe will improve system efficiency and reduce running costs. With an easy to use dial and simple operation for the user.

Wunda electronic wet room thermostat can be either surface mounted or recessed, using a suitable surface or patress box. This thermostat must be located where it would not be subjected to heat gain/loss (such as above radiators, direct sunlight or in draughts).
